Generate a role-specific learning-path deck for a new hire.

Have Copilot build a learning-path presentation tailored to a new hire's role instead of handing everyone the same generic onboarding deck.

MICROSOFT 365

SharePoint

PowerPoint

WORKS WITH

Copilot

Business Outcome

New hires ramping on content relevant to their actual role instead of sitting through generic onboarding material.

Workflow Steps

Step 1: Define the new hire's role and starting skill level

SharePoint

Write down the role's actual requirements against what this specific hire already demonstrated in interviews or their resume – a prompt that just says "new hire" with no role or skill context produces the same generic deck every time, defeating the point of personalizing it.

Step 2: Ask Copilot to generate the learning-path deck

Copilot

Have it build the presentation from your organization's actual training content, sequenced by what matters first for this role, not an arbitrary order.

PROMPT

Build a learning-path presentation for a new [role] starting with [skill level]. Pull from our training content library and sequence it by what they need in their first two weeks versus what can come later.

Step 3: Have the hiring manager review the sequence

PowerPoint

The manager knows what this specific new hire needs most urgently — have them confirm or reorder the sequence before it's used.

Step 4: Share it as the new hire's actual first-week guide

PowerPoint

Give the new hire the deck directly rather than a generic onboarding packet, so their first week has a clear, role-relevant path.

✓ Check the work

- The sequence was reviewed and confirmed by the hiring manager, not just generated and sent.
- Content pulled into the deck comes from current, approved training material.
- The deck is specific enough to this role that it wouldn't work unchanged for a different one.

Expected Outcome

A role-specific learning-path deck covering the training content that new hire actually needs first.
